

Solution Brief

Reimagine Data Operations

The Complexity of Data Management

Data silos and the complexity of traditional data management operations slow down access to data and data utilization while creating risk due to a lack of data visibility across its lifecycle. It's time to move away from the tedious tasks associated with storage management and focus on data lifecycle management and orchestration.

Logicalis helps you enjoy effortless data management by leveraging the HPE Data Services Cloud Console. This suite of SaaS-based apps sets the foundation for unifying data operations in one platform. HPE Data Services Cloud Console powers a cloud operational experience across edge, core, and cloud offering simple deployment, intent-based provisioning, and automated infrastructure management at scale.

A single destination for data life cycle management and orchestration across data infrastructure enables organizations to reduce operational costs, accelerate data-driven innovation, and minimize business and compliance risks.

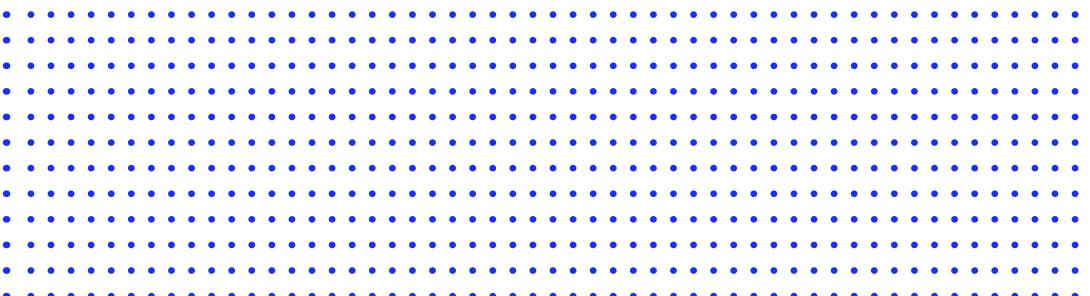

Cloud Infrastructure Services Unleash Data and Resources

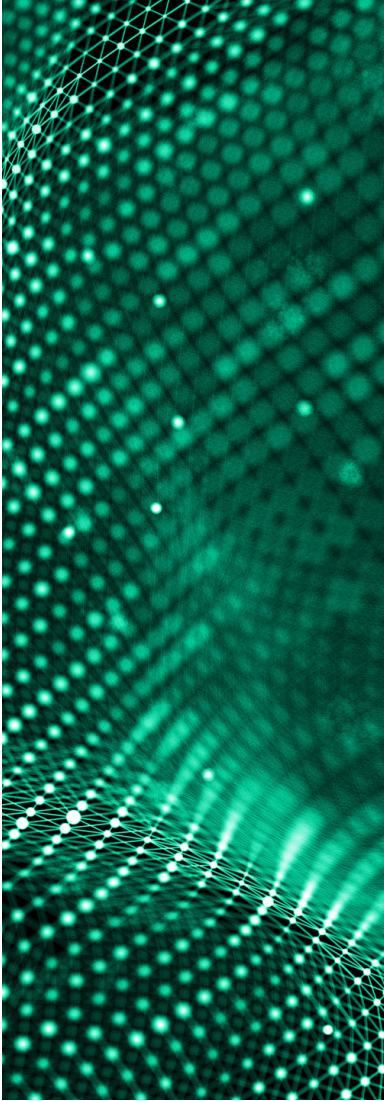

Harness a consistent cloud operating and consumption experience that abstracts data infrastructure control, eliminates management silos from edge-to-cloud, and enables as-a-service administration from a single console. Deploy new data infrastructure on demand, leverage new features instantly, and get global visibility across systems.

Logicalis Architects of Change™ can show you how HPE Data Services Cloud Console makes infrastructure so effortless it becomes invisible. New systems are automatically discovered, on-boarded, and easily configured so you can add devices to your fleet in minutes.

Operate at cloud scale and speed by automating your infrastructure with a fully programmable, single API endpoint in the cloud. This suite of integrated, automated, and policy-driven cloud data services helps you access, protect, search, and mobilize data wherever it lives—even as they accelerate app development, unlock data insights, and empower their data innovators.

Leveraging Data Services Cloud Console optimizes infrastructure management at scale by applying intelligence to maximize efficiency, reliability, and resources.

HPE Data Services Cloud Console Foundation

HPE Data Services Cloud Console is built on the secure and proven technology that underpins HPE Aruba Central, serving 90,000 customers and 100M endpoint devices via clusters deployed globally. It's a foundation that features advanced multi-level security including encrypted connectivity, multi-factor authentication, and role-based access control. The cloud-native architecture of Data Services Cloud Console manages data and infrastructure to a SaaS-based control plane. Separating the infrastructure control plane from the underlying hardware and moving it to the cloud eliminates complexity, fragmentation, limited visibility, and control of on premises software to drive optimized automation across entire fleets of infrastructure.

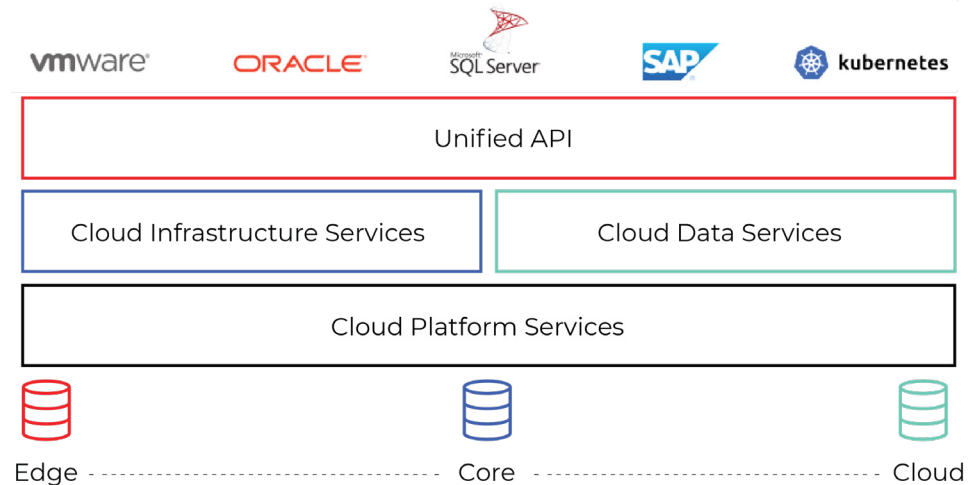

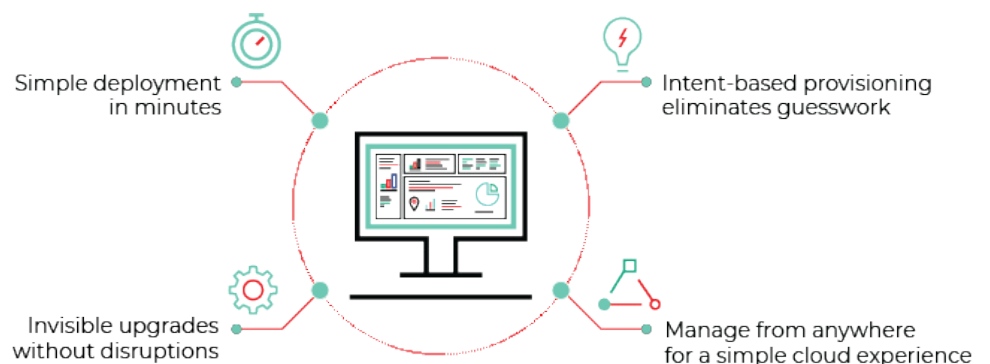

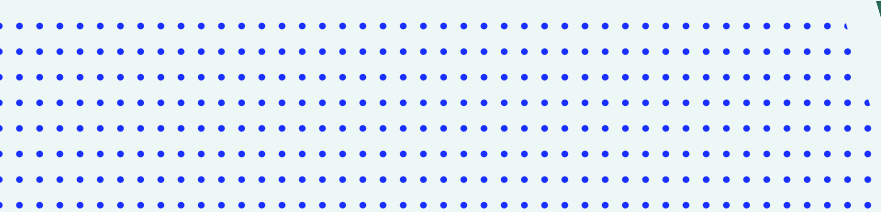

FIGURE 1. Data Services Cloud Console Architecture

The Data Ops Manager enables simple deployment in minutes. Manage infrastructure globally with a single, intuitive SaaS-based user experience accessible from anywhere, on any device. Managing hundreds of systems is now as simple as managing one. Intent-based provisioning represents a paradigm shift in workload optimization powered by AI. An intent-based, AI driven approach automatically determines where data should best be stored across a global fleet, eliminating guess work.

Intelligent insights and a fully programmable, unified API enable automated, non-disruptive, policy-driven upgrades to manage infrastructure at cloud speed and scale.

Logicalis Architects of Change™ Catalyze Digital Transformation

Logicalis, a trusted HPE partner since 1993, offers the **full HPE solution and services portfolio and works closely with HPE to deliver the right solution for each unique business.** Our Architects of Change™ are enabled by numerous HPE technology specializations and competencies to help you adapt to changing needs and drive success with innovative technology.

Leveraging HPE Data Services Cloud Console, Logicalis can help you deliver cloud agility across your IT environment, unify data management for a seamless experience from edge to cloud, and accelerate app development and insights with self-service, secure data access.

Count on Logicalis to provide answers to your questions and recommend the best possible solutions for your business priorities by focusing on:

- **Understanding your application workloads and associated data**
- **Providing expert advice and guidance on the best platforms and services to use**
- **Simplifying operations through service automation**
- **Implementing standardization and simplified management**
- **Streamlining the provisioning of services**
- **Properly managing workloads and data through standardized IT operations**

Move faster with award-winning Logicalis services and HPE Data Services Cloud Console.
